

FS Series™ Conditioners

Water Softeners and Filters with Simplified Controls

Effectively Used in Combination to

- Remove hardness
- Remove iron
- Remove manganese
- Remove chlorine
- Neutralize acidic water
- Remove sulfur
- Reduce unpleasant tastes and odors
- Reduce turbidity

 FS WATER CONDITIONER™

The FS Series water softeners and filters are designed to handle most common hard water problems from municipal or well water sources. Proven performance combined with control simplicity make the FS Series both affordable and effective.

- Quality engineered for long-lasting performance
- Corrosion-proof fiberglass media/filter tanks with thick wall construction — won't rust or deteriorate
- One-piece Noryl™ control valve is glass-reinforced for exceptional strength and durability
- Easy to set time of day — regeneration cycles are already set by factory
- Water meter can be added to regenerate your system only when needed

Water Right®
The Right Water
for Life

FS Series™ Conditioners

Water Softeners and Filters with Simplified Controls

The FS Series™ features a simple mechanical design that is user-friendly and easy to program.

FS Series Water Softener

Hard water reduces the ability of soap to lather and clean. Mineral deposits can also harm household appliances. The affordable FS Series uses quality resin media to remove hardness and unwanted minerals. Choose from three regeneration types:

1. time clock — T
2. mechanical meter — M
3. electronic meter — FSET

FSBF Acid Neutralizing Filter

Acidic water can be harmfully corrosive to your entire plumbing system. This condition can often be treated with a single acid neutralizing filter unit. Your water treatment professional may also recommend the use of a water conditioner after the acid neutralizer to remove hardness.

FSAF-GS Automatic Greensand Filter

The FSAF filter unit uses a greensand media to effectively remove iron, manganese and hydrogen sulfide from well water using an oxidation and filtration process. Potassium permanganate, housed in a small feed tank, helps efficiently clean the iron and sulfur from the greensand during backwashing.

FSBF-C Carbon Filter

Chlorine and slight sulfur odors can often be removed by a carbon filter unit. However, when odors are extreme, your water treatment professional may recommend a pre-chlorination system to help increase the life of the carbon unit. In such installations, the FSBF-Carbon filter will effectively remove the taste and odor associated with chlorine and sulfur.

Protect Your Household

The FS Series water softeners economically removes unwanted hardness or minerals from your household water. Used alone or in combination, the FS Series softeners and filters can solve the most challenging water problems existing today.

Count on your Water-Right dealer for expert advice on the use of this equipment and ways to optimize your water quality for drinking and household use.
